## Intended Purpose of each Page

1. **Home Page (Introduction):** The home page is the entry point to your website and serves as an introduction to your online presence. It provides visitors with an overview of who you are, your interests, and what they can expect to find on your website. It sets the tone for the rest of the site and invites users to explore further.
2. **Personal Page (Résumé and Goals):** The personal page acts as a showcase for your professional résumé, mission statement, and goals. Here, you provide detailed information about your educational and professional background, highlighting your achievements and experiences. Additionally, you express your personal mission and objectives, allowing visitors to understand your aspirations and values.
3. **Personality Page (Traits and Role Model):** On the personality page, you showcase your strongest character traits and values. It's an opportunity to share what defines you as an individual. Additionally, this page introduces someone you admire or look up to, shedding light on the qualities and attributes that inspire you.
4. **Personality Development (Skills and Reflection):** The personality development page serves as a platform to display the skills and abilities you've acquired on your personal journey. It's also a space for self-reflection and personal growth. You may discuss experiences, lessons learned, and insights gained, particularly related to concepts from the book "Twelve Pillars."
5. **Reference Page (Sources and Credits):** The reference page is a comprehensive list of all the websites, books, and resources you consulted while creating your website. It serves as a way to give credit to the sources that contributed to your knowledge and ideas. This page provides transparency to your visitors and can also serve as a valuable resource for those interested in further exploration.

## Website Theme:

My goal for this website is to create a professional-looking design with a vibrant color scheme. I've chosen to use vibrant colors like red and orange to give the website a lively and engaging feel. I believe this combination will help make the website visually appealing while maintaining a professional and organized look.

## Features I Intend to Use:

I plan to incorporate several features on my website to make it informative and engaging. These features include:

1. **PDFs:** I'll be using PDF documents to provide additional resources and information to my visitors. These PDFs will be well-formatted and easy to access.
2. **Images:** High-quality images will be a key component of my website's content. I'll carefully select images that are relevant to each page's content and use them to enhance the visual appeal of the site.
3. **Videos:** Videos are an effective way to convey information and engage my audience. I'll embed videos using the `<video>` element and ensure they are appropriately compressed for web viewing with good audio quality.
4. **Navigation and Structure:** I'll ensure that my website has a clear and intuitive navigation structure. I'll use a menu or navigation bar to help visitors easily access different sections of my site.
5. **Social Media Integration:** If I have relevant social media profiles, I'll include social media icons or links to my website to encourage visitors to connect with me on those platforms.
6. **Consistent Branding:** To create a cohesive and polished appearance, I'll maintain consistent branding elements throughout my website. This includes logos, color schemes, and typography.
